“Brazil’s most important neighbor in the region is Argentina, the only other South American country generating nuclear power. In the nuclear realm, these two countries’ pasts and futures are interconnected in many ways. For instance, the two formed an agency to verify the peaceful nature of their nuclear activities—the Brazilian-Argentine Agency for Accounting and Control of Nuclear Materials (ABACC)—and its operations affect not only bilateral relations but also the security environment of the region as a whole.” (p. 3)
